Customer case study

Telletire

Tire shop M&A roll-up operator ·
Kansas City, US

Telletire acquires independent tire shops across the US. Before ClientEnforce, every acquisition meant a new email thread, a new spreadsheet, and weeks of chasing missing documents. Today, Tim Tuckfield runs 2 simultaneous onboardings from a single dashboard — with every document tracked, every step enforced, and zero follow-up emails.

replaces email, spreadsheets &
chasing

9 sections

of due diligence — fully structured

0 emails

chasing missing documents

THE CHALLENGE

Telletire's model is simple in theory: acquire tire shops, integrate them into the platform, and scale. In practice, the integration process was a bottleneck. Each acquisition required the incoming shop to complete a 9-section due diligence questionnaire — covering financials, operations, equipment, staffing, leases, and more.

The process ran entirely over email. Documents arrived in the wrong format. Sections were missed. Tim would send a checklist on Monday and spend the rest of the week chasing replies. When two acquisitions were running simultaneously, the inbox became unmanageable.

"We previously used a platform that was not very user-friendly and did not perform to our expectations," Tim says. "We needed something that actually tracked tasks and helped the other side complete them."

WHY CLIENTENFORCE

After evaluating alternatives, Telletire chose ClientEnforce for its intake-first design. Where other platforms were built around client portals or general project management, ClientEnforce was built around a specific problem: getting structured information from someone on the other side, reliably, without a login.

Tim's team configured the 9-section questionnaire inside ClientEnforce, mapped each section to required documents and tasks, and set up automated reminders for incomplete steps. Each acquisition target receives a unique link — no account creation, no confusion.

"The setup process was much easier [than what we used before], and we immediately appreciated how well the platform tracks tasks and helps end users complete them efficiently and smoothly," Tim says.

THE RESULT

Telletire now runs multiple acquisitions simultaneously through ClientEnforce. Every section of the due diligence questionnaire is visible in one dashboard. Reminders go out automatically. Nothing falls through the cracks.

When Telletire needed additional functionality, the ClientEnforce team moved quickly. “Initially, the platform met about 90% of our needs,” Tim notes, “but after discussing the additional functionality we were looking for, those features were promptly added.”

The result: a repeatable intake system that scales with each new acquisition — without adding headcount or inbox chaos.

“ClientEnforce checks all the boxes for managing tasks, tracking, and workflow needs — we’d highly recommend it to any organization looking for a more effective and user-friendly solution.”

— Tim Tuckfield, M&A Integration & Optimization, Telletire

ClientEnforce is how M&A operators collect due diligence from acquisition targets — without the email back-and-forth.
